

LLM Elicitation: Coefficient of Variation Analysis

C. Summary Statistics

KEY FINDINGS

- Quantity CV Range**
 - Mean: 16.3%
 - Range: 12.1% - 19.8%
 - Stable across difficulty levels
- Probability CV Range**
 - Mean: 5.7%
 - Range: 1.4% - 9.8%
 - Lower than quantity nodes
- Dominance Test**
 - 9/9 comparisons show Quantity CV > Probability CV
 - 100% dominance rate
- Difficulty Trend**
 - No consistent increase
 - 2 models: decreasing
 - 1 model: increasing
 - Suggests weak/absent effect

CONCLUSION:
Quantity nodes elicit more disagreement than probability nodes, independent of task difficulty.
